Terrific Tree Craft Paper

Incorporate nature into your crafts with Terrific Tree Paper! Eight types of wood are included in each package: Birch, Cedar, Cherry, Maple, Oak, Pecan, Pine, and Walnut. One side of each piece of paper features the bark pattern of the tree, while the reverse side features the corresponding wood grain pattern.

Here are a few interesting ways to use Terrific Tree Paper:

- Cut the paper into mosaics for nature-themed crafts or collage!
- Spice up paintings and drawings! Trace a tree onto Terrific Tree Paper, then cut it out and paste it into a drawing or painting for a different, naturalistic effect (for an even more realistic look use Crafty Leaves on the tree's crown)!
- Create a 3-D classroom forest. Roll Terrific Tree Paper around old toilet paper or paper towel tubes and cut the tubes to make various tree heights. Then cut leaves out of green paper or use Roylco's Botanical Cuts to create a full tree crown.
- Make a woven wood Bookmark! Great for teaching children to follow instructions and use fine motor skills in folding.

1. Cut Terrific Tree Paper into 1/2" x 11" strips.

2. Glue two strips together at the corner.

3. Glue two more strips on top the first strips but directly underneath.

4. Fold each strip, in order from left to right, across the others.

5. Keep folding until you near the end of the strips.

6. Glue the ends together and trim the excess to form the final angle.

Extra tip:
Alternate the pattern by making the first two strips the grain side of the wood and the second two strips the bark side.
