DuneCraft

GROWING AND CARE INSTRUCTIONS

The Double Bubble gives you more space and double the fun! Perfect for the office or home, these lush miniature landscapes are refreshing sights and make for relaxing scenery all year long. Everything you need to start the fun is contained in your kit. Now get growing and thanks for your purchase!

CONTENTS

- Double Bubble Glass Terrarium
- Aloe seed pack
- Cactus Mix seed pack
- Natural Sand
- Germination Disk
- Care Instructions

PLANTING INSTRUCTIONS

- Carefully unwrap your Glass Terrarium and place on a solid surface.
 - Place your germination disk in a separate container. Add 2 cups of luke warm water. The germination disk will absorb the water and expand into your growing medium.
 - After the disk has absorbed the water carefully use a plastic spoon (not provided) to fill the bottom of your Double Bubble with the germination mixture. Gently use the plastic spoon to push down the growing medium so it is about 1 ½ inches thick and sits firmly on the base of the glass terrarium. Make sure it does not extend out of the opening. The growing medium should be well moistened but make sure there are no pockets of standing water.
 - Carefully pour seeds from the pack onto a creased paper that is laid flat on a flat surface, sprinkle half the seeds onto your growing medium as desired. Gently push them into the medium with the plastic spoon. This kit comes with enough seeds for two plantings. Be sure to save half the seeds from each pack if you want another planting and store your saved seeds in a cool, dry area without too much humidity.
- *Tip – If you CAREFULLY hold the terrarium at an upwards angle while planting your seeds it is easier to guide them into the correct positions.
- Put the entire terrarium inside of a sealed plastic bag or cover the small opening with saran wrap.
 - The cactus seeds will sprout in about one to two weeks. Aloe will take about two to four week. Remove from bag or discard saran wrap from the opening of the terrarium. Be sure to water weekly or as needed to keep soil from drying out after sprouting.

ALOE

Grow one of the most indispensable and useful plants in the world! There are 200 biologically active compounds in this amazing plant that have helped to treat more than 250 human health problems. Aloe is also different from most house plants in that it releases oxygen at night and removes carbon dioxide from the air.

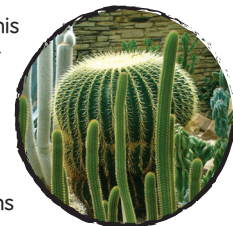

Growing Information

Let this plant dry out thoroughly between watering. Aloe likes bright light and partial sun. They will thrive in more sun as they get older.

WILD WEST CACTUS MIX

This special collection of cacti is so unusual it's out of this world! This deluxe mix includes the cacti classics Giant Saguaro, Golden Barrel, and more! When the first explorers came to the Americas they thought cacti were quite possibly from space as they had never seen any plants like them before. These succulent

perennials are native to arid and semi-arid regions across the West and can be spotted in areas like Arizona, Nevada and even parts of California. Cactus plants grow as trees, shrubs and even vines. They have no leaves but they possess small spines which are like modified leaves. These spines protect the cacti from being eaten by animals. Enjoy this variety of cacti and all their unique and interesting properties!

Growing Information

Cacti require bright light and/or direct sunlight to thrive. Can not handle outside direct sunlight until they are a few years old. Let soil dry thoroughly between waterings. Only need to be watered once a month, more in Spring and Summer.
