## Vocabulary in Context

Read the passage.

### The Trail of Tears

The original inhabitants of what is now Kentucky and Tennessee were an **industrious** people who lived mainly by hunting and farming. They were called Cherokees by the Europeans who first made contact with them. The Europeans had settled along the East Coast in the early 1600s. These first meetings between European traders and Cherokees were friendly but were to have **devastating** consequences for the Native Americans later. The Europeans brought goods for trading, it's true. But they also brought smallpox, a disease that had been unknown in North America before their arrival. This disease left the body covered with sores and was often fatal. In 1745, a smallpox **epidemic** struck the Cherokee people. It killed more than half the population. And that was just the beginning of the Cherokee people's woes.

The United States government recognized the Cherokee Nation as a separate country and **acknowledged** its right to sign treaties, or legally binding agreements, with other countries. In treaty after treaty, the Cherokees gave more and more of their land to the United States government. In return, they gained the right to **evict** anyone who settled illegally on the remaining land. But settlers ignored these agreements. They continued to move onto Cherokee land in great numbers. The United States government did not even pretend to be **impartial** in the disputes that arose as a result. The appeals of the Cherokee leaders fell on deaf ears. The theft of their land continued **unabated**. By 1828, the Cherokee nation was one-tenth the size it had been a hundred years earlier.

In 1835, an **agent** of the United States government persuaded twenty Cherokees to sign one final treaty. According to its terms, the Cherokees would get five million dollars for leaving the last of their land and moving almost a thousand miles west. The Cherokee signers had no **authority** to act for the entire Cherokee Nation, but this fact was brushed aside as **irrelevant** by those in the government who wanted the land. The chief justice of the United States declared the agreement a **sham**. His opinion **infuriated** President Andrew Jackson, who replied, “The chief justice has made his decision; now let him enforce it.”

**Precisely** two years after the signing of the agreement, on the orders of the president, two thousand heavily armed United States soldiers arrived on Cherokee land. They drove the Cherokee families from their homes. Nearly twenty thousand people were forced to **trek** more than nine hundred miles west into what is now Oklahoma. They went mostly on foot. It has been **estimated** that about four thousand Native Americans died on the journey, which became known as the “Trail of Tears.” In a sense, though, the Cherokees had traveled an even longer and even more sorrowful trail, a journey in time that began when the unsuspecting Cherokees first greeted the Europeans as friends.

- Answer each of the following questions with a sentence. If a question does not contain a vocabulary word from the lesson’s word list, use one in your answer. Use each word only once.

## Danger: Manatees at Play

The subject of manatees takes us far back in the history of both natural science and imaginative storytelling. Manatees have been in existence for fifty million years. This sea animal was probably what sailors were seeing long ago when they reported visions of mermaids sunning themselves on rocks far in the distance.

Closer observation of the manatee shows it to be a **ponderous** mammal. It measures from eight to twelve feet in length and weighs up to three thousand pounds. The manatee's tapered body, shaped somewhat like that of an overgrown seal or miniature whale, has two front legs and a broad flat tail. The legs and the tail all act as flippers.

Manatees live singly or in small groups. They can eat two hundred pounds of food a day, grazing contentedly on water hyacinths and other **aquatic** plants. A manatee sometimes may stand up straight in the water, often with strings of sea plants hanging like hair from its head.

In the United States, Florida's coastal waters are the manatee's principal habitat. These sea creatures are quite **docile** by nature. In fact, they have no fear of humans; they seem to love company! Manatees allow swimmers to play alongside them, something that is discouraged by game wardens.

Manatees feed just below the surface. They are often unobserved by speeding boaters who may go **blithely** on their way, ignorant of the terrible injuries they have just inflicted. Being struck by a high-speed propeller can be **lethal**; almost a third of all manatee deaths are boat-related. Wildlife wardens estimate that ninety percent of all adult manatees have been **mutilated** by the propellers of speeding boats. The reasons for this are not entirely clear—perhaps the manatees have poor hearing and are unaware of a boat's approach. Perhaps they are simply not **nimble** enough to get out of the way in time.

Because of the enormous increase in the number of powerboats in Florida, for years the manatee population **dwindled**, and the animal's prospects of survival were **bleak**. These creatures were on the **verge** of extinction. But people have become more aware of the **plight** of the manatee. Laws such as the Endangered Species Act and the Marine Mammal Protection Act prohibit harming manatees. More needs to be done, though. People operating powerboats in areas where manatees live need to be more **vigilant**. If they

were, many collisions could be **averted**. And speed limits need to be strictly enforced, even though people whose livelihood depends on the boating industry **assert** that too much regulation would cause economic hardship.

Still, something amazing has happened. In recent years, because Florida authorities carefully **monitored** the manatee population and took actions to protect them, an aerial survey showed that more than six thousand manatees now inhabit the area's waters. Manatees were removed from the endangered-species list in 2016.

## Fun & Fascinating FACTS

.....

- The Latin word for *water* is *aqua* and forms the root of the adjective **aquatic**. Other words formed from this root include nouns such as *aquarium* and *aqueduct*, “a large pipe or channel for water.” You might guess that the word *aquiline* comes from the same Latin root. Actually, it comes from a different Latin word altogether, *aquila*, which means “eagle.” An *aquiline* nose is one that is curved like an eagle’s beak.

.....

- The ancient Greeks believed that the dead went to the underworld, where they bathed in the river Lethe, which caused them to forget their earthly lives. The Latin word *letum*, “death,” comes from the name of the river and forms the English adjective **lethal**, “capable of causing death” (a *lethal* weapon).

.....

- The noun **plight** carries with it a reminder of love and marriage in centuries past. Once it was a verb and meant “to promise; to pledge.” When two people got engaged to be married, they “plighted their troth.” This means they would dishonor themselves if they were not faithful and true to each other. *Troth* is a word that is no longer in use, meaning “loyalty; faithfulness; honor.” It still appears as part of the word *betroth*, meaning “to promise to marry.”

.....

- Several words come from the Latin *vigilare*, “to be watchful.” In addition to **vigilant**, there is *vigil*, a watch kept during normal hours of sleep (Parents keep a *vigil* by the bedside of a very sick child.) and *vigilante*, a person who takes the law into her or his own hands, usually as part of a group.
