Add as in model:
Where does the 2 of 12 come from?

$\qquad$
$\underline{10}+\underline{4}=14+\ldots=$

| $\bullet^{\bullet}$ | $\bullet^{\bullet}$ |
| :--- | :--- |

| $\bullet$ | $\bullet$ | $\bullet$ | $\bullet$ |
| :--- | :--- | :--- | :--- |
|  | $\bullet$ | $\bullet$ | $\bullet$ |

| $\bullet^{\bullet}$ | $\bullet^{\bullet}$ |
| :--- | :--- |

| $\bullet$ | $\bullet$ | $\bullet$ | $\bullet$ |
| :--- | :--- | :--- | :--- |
| $\bullet$ | $\bullet$ | $\bullet$ | $\bullet$ |

| $\bullet$ | $\bullet$ | $\bullet$ | $\bullet$ |
| :--- | :--- | :--- | :--- |
| $\bullet$ | $\bullet$ | $\bullet$ | $\bullet$ |$=$

$\qquad$

| $\bullet$ | $\bullet$ | $\bullet$ | $\bullet$ |
| :--- | :--- | :--- | :--- |
| $\bullet$ | $\bullet$ | $\bullet$ | $\bullet$ |
|  |  |  |  |

| $\bullet$ | $\bullet$ | $\bullet$ | $\bullet$ |
| :--- | :--- | :--- | :--- |
| $\bullet$ | $\bullet$ | $\bullet$ | $\bullet$ |$=$

$$
\begin{array}{|ll|ll}
\bullet & \bullet & \bullet & \bullet \\
\bullet & \bullet & \bullet & \bullet \\
\hline
\end{array}=
$$

Multiples of

423: The digits are 4,2 , and 3 . The SUM of the digits is $4+2+3=9$
For all multiples of 9: The sum of the digits is always 9 (or a multiple of 9 ).
We know that 423 is a multiple of 9 because $4+2+3=$ $\qquad$ .
$111,111,111$ is a multiple of 9 because the sum of the digits is $\qquad$ .
$8+1=9$.
$6+3=$ $\qquad$ So $\qquad$ and $\qquad$ are multiples of 9 . So $\qquad$ and $\qquad$ are multiples of 9 .
$7+2=$ $\qquad$ So $\qquad$ and $\qquad$ are multiples of 9 .

Write the unit's digit to make two -digit multiples of 9 .

| $\underline{81}$ | $\underline{7}$ | $\underline{6}$ | $\underline{5}$ | $\underline{4}$ | $\underline{3}$ |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $\underline{2}$ | $\underline{1}$ | $\underline{9}$ | $\underline{7}$ | $\underline{4}$ | $\underline{6}$ |
| $\underline{7}$ | $\underline{8}$ | $\underline{3}$ | $\underline{5}$ | $\underline{6}$ | $\underline{2}$ |
| $\underline{5}$ | $\underline{4}$ | $\underline{1}$ | $\underline{8}$ | $\underline{2}$ | $\underline{7}$ |

Count by 9s from 9 to 90:
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

With feet (marching?) or fist keeping the rhythm, repeat with a slow steady beat:

$$
\begin{array}{llllllll}
1 & 2 & 3 & 4 & 5 & 6 & 7 & 8
\end{array}
$$

On the same 4-beat rhythm, marking the rhythm with feet or fist, repeat as needed: Read with even beat:

Read with even beat:

56
is

| 3 | 4 |
| :---: | :---: |
| times | 4 |
| 7 | 8 |
|  |  |
| times | 8 |

| 1 | 2 | 3 | 4 |
| :---: | :---: | :---: | :---: |
| 12 | is | 3 times | 4 |
| 5 | 6 | 7 | 8 |
| fifty - | six is | 7 times | 8 |

Based on that information:
$12=$ $\qquad$ $\times$ $\qquad$ You see 12, and you keep counting: 3 times 4.
$56=$ $\qquad$ $\times$ $\qquad$ You see 56 and you keep counting: 7 times 8 .

Now we know two different Factor pairs for 12, 16, 36:
